

The NOCO Genius Boost GB40, GB70, and GB150 are charged either through 12v accessory plug or through a USB cord. A Micro USB cord and 12v car charger are included in the box. The 12v car charger is the preferred method for charging as it is the fastest method. The Genius Boost products are completely rechargeable from any USB-powered port, like a wall charger, USB car charger or laptop. **If you choose to use the USB 110v wall charge method, a wall charging adaptive block that accepts USB must be purchased separately.**

Generic Photo (example only) – Charge Block Sold Separately

The GB40 and GB70 are recommended more for consumer use. The GB150 is more of a professional product intended to start all gas and diesel vehicles in the GM line-up. If you are selling to the Dealership Technicians and/or Service Advisors for in dealership use, we highly recommend the GB150. The GB150 includes a Built-in Voltmeter that allows the individual to determine the status of the battery quickly. The GB150 is capable of jump starting up to 80 vehicles on a single charge. It's rated for over 1,000 charge cycles and holds its charge level for over a year with minimal power loss.

GB150 Part # 19366933

MSRP \$299.00
